II Sem B.E. (Credit System) Mid Semester Examinations - II, March 2014

13MA201 - ENGINEERING MATHEMATICS - II

Duration: 1 Hour

Max. Marks: 20

Note: Answer **Five full** questions choosing at least **Two** from **each Part**.

Part - I

1. Find the inverse Laplace transform of (i) $\frac{s+3}{s^2+2s+5}$ (ii) $\log\left(\frac{s+a}{s}\right)$.
2. State and prove convolution theorem.
3. Solve the differential equation $\cos(x+y+1)dx - dy = 0$.
4. Solve the differential equation $(1+3e^{x/y})dx + 3e^{x/y}(1-\frac{x}{y})dy = 0$.

Part - II

5. Using Rayleigh's power method, obtain the largest eigen value and the corresponding eigen vector of the matrix $\begin{bmatrix} 4 & 1 & -1 \\ 2 & 3 & -1 \\ -2 & 1 & 5 \end{bmatrix}$. Start with the initial eigen vector $\begin{bmatrix} 1 \\ 0.8 \\ 0.8 \end{bmatrix}$ and carry out six iterations.
6. Check whether $V = \{(x, y) / x, y \in R\}$ with vector addition defined by $(x_1, y_1) + (x_2, y_2) = (x_1 + x_2, y_1 + y_2)$ and scalar multiplication defined by $\alpha(x_1, y_1) = (\alpha x_1, \alpha y_1)$ is a vector space.
7. (i) Define linear dependence and linear independence of vectors.
(ii) Check whether the set of vectors $V = \{(1, 2, -1), (1, -2, 1), (-3, 2, -1)\}$ is linearly dependent.
